HSMA Session 3A: Exercise 3

Let's try creating some more maps for the STATS19 dataset.

Today, we're just going to use a **geojson** file that already has some counts per MSOA joined in.
stats_19_counts_by_msoa_3857.geojson

Create at least one of each of the following types of map:
- **Choropleth** (from this file)
- **Heatmap** (using the point dataset from the previous exercise)

Try out different filters, categorisation modes and heatmap settings.

After you have done the above, you could also carry on working with point data, including trying out rule-based point styling.

Make sure you save any project files you create at the end of the session, as we will be carrying on using these maps for an exercise in the session next week!
